FineTech CME Gateway

Configuration and Risk Management Guide

Introduction

- The FineTech CME Gateway is aimed at brokers that need a cost effective solution for their customers that need to manage risk at CME but who do not meet the requirements for direct market access (DMA).
- The gateway essentially acts like a "traffic cop".
- All trader orders flow through the gateway which performs risk management functions before releasing them to GLOBEX via an ILINK session.
- The gateway has a web based management GUI
- The gateway can be operated by FineTech as a managed service on behalf of the broker, or can be deployed and managed in house by the broker as required.

- All incoming order flow passes through a risk management component before being released to the exchange
- Risk management includes margin calculation, position limits (max long/short/net) and activity limits (max /day).
- For each account incoming orders are processed sequentially and treated as 'pending'. Incoming orders are assumed filled for margin calculation purposes <u>before</u> they are released to the exchange.
- Thus, if a client erroneously releases numerous duplicate orders to the gateway, as long as this violates margin or contract count limits, they will be rejected by the gateway and not released to CME.

Gateway Architecture

Client	A FIX connection from a trader to the Gateway
Initiator	A FIX connection to CME (ILINK connection)
Acceptor	A TCP socket on the gateway server that accepts incoming Client FIX sessions
Account	Each client is linked to an account for risk management purposes. One account can have multiple clients connected to it. Each client is linked to one and only one account.

- Navigate to the gateway using a web browser.
- Initially you will need to log in using credentials provided by the administrator.

- All administration functions are selected from the menu
- Different gateway users will see different functions depending on their permissions
- The administration web site is connected directly to the gateway.

Unless explicitly stated otherwise in this document, changes you make take effect immediately.

Gateway Administration > Gateway

Current Status: Normal Operation

Warning: These options affect the entire gateway and all accounts on it

Cancel All Working Orders	Cancel all working orders	All working orders at CME are canceled
Place Gateway Into Liquidation Only Mode Stop Trading	Liquidation Only Mode	Traders can only trade out of existing positions and can't put on new ones
Resume Normal Trading	Stop Trading	Traders can not send new orders or cancel existing ones
	Resume Normal Trading	Normal activity

Cancel All	Cancel all working orders for this account
Halt	Halt trading for this account
Liquidate	Halt trading for this account and liquidate all its positions
Refresh	Refresh the screen
Account ID	Click on Account ID to go to the account profile screen
Margin Warning Level	An automated alert will be triggered when the account's margin usage passes this threshold
Margin Max Level	If the account reaches this utilization trading will be stopped and/or positions automatically liquidated
Pending	Pending contracts are trades received at the gateway but not yet sent to CME (but are factored in to exposure calculation)
Working	Contracts working at CME
Filled	Contracts filled
Max Trade Size	Fat finger protection
Max Position	Set limits on positions for the entire account
Exposure	The total number of contracts to be margined. Cost = Margin * Exposure * Margin Adjustment

Gateway Administration > Limits

For an account, list the contracts allowed to be traded and the sizes on each Limits set at the account level are checked first, and then at the contract level. The lower out of the account and product limits are the ones that are effective If a contract is not listed here it cannot be traded.

Account ID 1000 Description ABC TRADING INC Search 🗸

Symbol / Sec Desc	Description	Max Contracts/Day	Max Net	Max Long	Max Short	Max Trade Size	Edit	Delete
GCZ4	COMEX 100 GOLD FUTURES	100	100	100	100	100	Edit	Delete
							Insert	

Symbol / Sec Desc	You can specify a contract either by the security description (e.g. GCZ4) or by the symbol (GC). If you use the symbol, all contracts based on that symbol can be traded.
Max Contracts/Day	Maximum number of contracts allowed to be traded per day
Max Net	Maximum net position
Max Long	Maximum long position
Max Short	Maximum short position
Max Trade Size	Fat finger protection
Edit	Change values
Delete	Delete the user's ability to trade this contract
Insert	Insert a new contract (fill in details to the left)

Gateway Administration > Clients

A client is a single incoming client session. Multiple clients can be grouped under the same account.

New Client Do

Download

	Enabled	Logged In	Acceptor Port	Client CompID	Password	Initiator (CME) CompID	Account	Description			
Edit	Y	Ν	5000	AAAA	12345	SH10Y0	1000	AAAAAkIj	Enable	Disable	Error Log
Edit	Y	N	5000	BBBB	12345	SH10Y0	1000	BBBBB	Enable	Disable	Error Log

New Client	Click New client to create a new one.
Download	Click Download to receive a CSV file of the existing client.
Edit	Click Edit to edit client details
Enabled	If a client session is disabled the client is logged out and cannot log back in
Logged In	Indicates if the client is currently logged in
Client Comp ID	Essentially the client's user ID
Password	The password is specified by the client when logging in
Account	The account linked to the client for risk purposes
Enable	Enable this client
Disable	Disable this client
Error Log	The Error Log button shows reject messages relating to the client

Gateway Administration > Acceptors

An acceptor is the connection point for a client. This is a networking implementation detail. At least one acceptor must exist. Ensure Windows Firewall (and any other firewall you use) is configured to permit external connections to each acceptor. You can use IP address filtering if desired, or simply open the port to all.

New Acceptor	D	ownload							
	Port	Enabled	Initialized	Started	Description				
Edit	5000	Y	Y	Y	Primary Acceptor	Enable	Disable	Start	Stop

New Acceptor	Click New Acceptor to create a new one.
Download	Click Download to receive a CSV file of the existing acceptors.
Edit	Click Edit to edit acceptor details
Enabled	If a client session is disabled the client is logged out and cannot log back in
Start/Stop	Start/Stop allow the acceptor to be shut down and restarted intraday
Enable	If an acceptor is disabled it has to be enabled before it will start If an acceptor is enabled it will start automatically when the server starts

Gateway Administration > Initiators

An Initiator is a CME ILINK (FIX) session. After risk management, the primary function of the gateway is to forward order flow from a client to an ILINK session at GLOBEX. At least one initiator must exist.

	Enabled	SenderCompID	IP	Port	Password	Initialized	Started	Logged In						
Edit	Y	3U7064N	69.50.112.141	25936	3U7	Y	Y	N	Enable	Disable	Orders	Start	Stop	Error Log
Edit	Y	223004N	69.50.112.142	42047	8Q3	Y	Y	N	Enable	Disable	Orders	Start	Stop	Error Log
Edit	Y	K28004N	69.50.112.138	41714	K28	Y	Y	N	Enable	Disable	Orders	Start	Stop	Error Log
Edit	Y	P74004N	69.50.112.142	42045	P74	Y	Y	N	Enable	Disable	Orders	Start	Stop	Error Log

New Acceptor	Click New Initiator to create a new one.
Download	Click Download to receive a CSV file of the existing initiators.
Edit	Click Edit to edit initiator details
Start/Stop	Start/Stop allow the initiator to be shut down and restarted intraday
Enable	If an initiator is disabled it has to be enabled before it will start If an initiator is enabled it will start automatically when the server starts
Error Log	The Error Log button shows reject messages returned from CME (or sent to it)
